

Laminating

It is possible to add new functions and added value to materials by fusing different materials.

Depends on material and required performance, production process will change.

(※Flat type or Glue type)

Processing Material

① Textile Material

It can be laminated with several types of textile.(Woven/Knitting/Non woven...)

※Both our products and supplied products are possible. (Need to check the material by small test)

The width can be processed up to 190cm.

② Breathable-Waterproof Film

Basically we will use Polyurethane Breathable-Waterproof Film prepared by TOHKAI

•Laminate Textile materials/Textile material and Breathable-Waterproof Film.

There are several types of adhesive. It is an adhesive that does not generate VOC and is friendly to the human body and the environment.

Processing Example

Laminate Lace with another fabric
